

Telehealth Consultation Guidelines

Category: Clinical Operations | Policy No: CHA-POL-010 | Effective: 01 Jan 2026 | Version: 1.2

Telehealth consultations are available for follow-up visits and non-urgent concerns only; new patient intakes must be conducted in person. Clinicians must confirm the patient's identity and location at the start of every telehealth session. Sessions must be conducted via the approved encrypted platform only — consultations over standard video call apps are not permitted due to data protection requirements.
