

Elderly and Vulnerable Adult Care Considerations

Category: Clinical Operations | Policy No: CHA-POL-015 | Effective: 01 Jan 2026 | Version: 1.2

Staff must screen elderly patients for signs of self-neglect, isolation, or potential abuse during routine visits using the vulnerability checklist. Home visit requests for patients over 75 who miss two consecutive appointments should be prioritized over standard follow-up procedures. Any concerns about a caregiver's conduct must be documented and referred to the social services liaison.
